Hi Jeff,

Here's the excel sheet I said I would pass along. We would like to have the alluvial map you developed for Mark used with this data to show PRPs. The classes that should be displayed:

Excel Sheet	Color	Map Legend
NR	Grey	Not Researched
RA	Green	Rio Algom (Viable)
Yes	Different Green	Viable Company
Partial	Orange	Partial Viability
No	Red	Non-Viable Company
KM	Different Red	Kerr McGee

Same size map. I have used the entire sheet, so some of these are outside of the area. The same mines should be displayed that you already have showing. I left the mine names to allow a check to be done to make sure the NMED IDs match up to the existing dB you are already using. If they don't let me know.

Thanks  
Kevin
